

1/3/19

Dear Harriet Harman,

48 Brayards Road,
Peckham
London . SE15 3RA

Let me introduce myself, I am a determined student of St Mary Magdalene called Tirrel. My class and I have been thinking of ways to improve the drastic/major problems with climate change as it is impacting our lives in a negative way.

I'm striving to stop the extreme amount of use of unrecyclable plastic in the world. It has gone so far that the average amount of plastic use by a person is approximately around 76kg (Double my weight)! This needs to be stopped because its gradually consuming our planet by; killing our creatures, polluting our oceans, and filling up our land with leftover material which have not been recycled. The fumes that the plastic give off when it is burnt can heavily damage a human's body or even poison them which unfortunately, might lead to death. There are many different types of ways that we can solve this problem but most people have carried on their bad habits of overuse of plastic

We as a year 6 class have come up with some ideas to stop this crisis before it gets too out of hand in our school:

Information leaflets

Sending out information leaflets to make sure parents are aware of what is going on could impact the way they recycle and handle their plastic use and improve their way of living. It will also help if they could spread the word because then it would be easier for this to be stopped.

Recycle Reuse Reduce

Another way to try decrease the amount of waste we produce is to have teachers put up signs explaining why the three Rs are important and should be used more frequently using these methods should help stop the problem with disposable plastic and everything should be back to normal.

We would love you to support us in what we are trying to do and any sort of help would be greatly appreciated. Thank you for reading

Kind Regards
Tirrel
